

AegisEdge security architecture

Version 2.3 - controlled synthetic evidence source

Document purpose

This synthetic document supports the public CRA Evidence OS judge demo.
It contains no customer, personal or confidential information.

Scope

AegisEdge Gateway is a fictional managed industrial edge product.
The document is not a conformity assessment or legal opinion.

System boundaries

Version 2.3 - architecture context

Paragraph 1

The gateway separates management, telemetry and workload traffic.

Paragraph 2

Administrative interfaces are reachable only through the managed control plane.

Paragraph 3

All examples, versions and identities in this file are synthetic.

Identity lifecycle

Version 2.3 - manufacturing and rotation

Paragraph 1

Device identities are created during the fictional manufacturing flow.

Paragraph 2

Rotation policy is reviewed whenever the cryptographic runtime changes.

Paragraph 3

Review evidence must retain its exact source and product version.

Administrative channel protections

Version 2.3 - cited evidence page

Paragraph 1

The management plane is separated from application workloads.

Paragraph 2

All administrative traffic is protected using mutual TLS 1.3.

Device identities are provisioned during manufacturing and rotated every 90 days.

Failed authentication attempts are rate limited and recorded.

Paragraph 3

Any change to the TLS runtime triggers evidence review.
